Comments:

Is the evaluated use attainable? ☐ Yes ☐ No

Comments: The UAA was conducted in June and no WBCR was observed. The map submitted with the UAA portrayed only 2 of the 3 reported sites. The committee generated a new map that correctly portrayed the coordinates of the 3 reported sites. However, since the middle site (002) appears to be on a tributary rather than on Brushy Creek itself, only 2 sites, 001 & 003, were considered. Neither site met either the maximum or average depth criteria. Also note that site 003 is the dividing line between the upstream portion of this creek (classified as Class C) and the downstream portion, which is classified as Class P and assigned a different WBID number, 1592. As such, only the upstream view of site 003 was considered for the analysis of WBID 1593. Because only that view plus the up- and downstream views at site 001 were evaluated on this segment, there was insufficient information for the committee to make a recommendation.
